Developed by the APFFA Hip Fracture Registry Working Group & FFN Hip Fracture Audit Special Interest Group

7 steps to establishing a Hip Fracture Registry

1. Engage clinical leaders & champions
2. Consolidate & broaden stakeholder buy-in
3. Build a case for change
4. Plan & fund registry
5. Adopt minimum common dataset (MCD)
6. Set up pilot registry
7. Navigate governance & ethics

To learn how clinicians, hospital administrators, healthcare systems & governments can collaborate to establish 1 national HFR per country

WORLD-FIRST HIP FRACTURE REGISTRY TOOLBOX

LANDSCAPE

Osteoporosis accounts for 9 million fractures per year worldwide, with >200 million people currently living with the disease.

By 2050, between 4.5 - 6.3 million hip fractures are predicted to occur worldwide, 1/2 of which will occur in Asia.

<1 in 3 hip fracture patients regain their previous level of mobility.

18 countries have established a hip fracture registry to date, all of which are at different stages of development.

ROADMAP FOR CHANGE

Establishment of hip fracture registries globally will improve care for the millions who sustain hip fractures each year.

The Hip Fracture Registry (HFR) Toolbox advocates for & supports the establishment of 1 national registry per country.
